

Observer height needed to see Sri Pada

Height needed

- Visible standing on the ground
- Needs 10 m (3 storeys)
- Needs 30 m (10 storeys)
- Needs 60 m (20 storeys)
- Needs 100 m (33 storeys)
- Needs 150 m (50 storeys)

SRI PADA VISIBILITY

Adam's Peak · 6.8094N 80.4994E · 2192 m DSM / 2243 m surveyed

Line of sight from a 30 m / 90 m perimetric GLO-30 DSM, corrected for earth curvature and atmospheric refraction ($k=0.13$). Canopy is included in the surface; it blocks realistically but also lifts forested observers. Colour shows the minimum observer height above ground needed to clear the terrain between that point and the summit; the same statistic run in reverse is a trail-building viewpoint. Haze is not modelled: treat anything beyond about 100 km as geometric only, not a real sighting. CRS: EPSG:5235 (SLD99).

15.4% of Sri Lanka's land sees the summit from the ground; 37.2% with 150 m of height beneath it; 62.8% never, at any height.
